

PRESS RELEASE, MARCH 2008

HANEX[®], for one seamless surface

HANEX[®], the internationally proven solid surface material, has been launched in the Australian market by XFLO Solid Surface Products. HANEX[®] has been manufactured by Korean based Hanwha L&C Corp since 1995.

HANEX[®] is an ideal solid surface material for a wide range of residential and commercial applications where a seamless finish is required. These include benchtops, splashbacks, integrated sinks and bowls, vanity tops and basins, bathroom wall cladding and surrounds, tabletops, stairs, shelving and even furniture.

The HANEX[®] range offers beauty, durability, aesthetics and a designer colour range. Made from a unique blend of acrylic resins and natural materials, HANEX[®] sheets can be cut, shaped and formed into a variety of designs. The products are non-porous and are certified NSF 51 for food preparation areas. They are heat resistant, scratch and stain resistant and stronger than stone. Another practical advantage: HANEX[®] can also be repaired and restored to its original condition if damaged in use.

HANEX[®] is backed by a 10-year limited warranty and XFLO's commitment to delivering quality products, technical service, assistance and experience.
